

Pre-Check task

1. Develop Class Participant, which contains information about participants in the competitions. It should contain following attributes: name and surname, age, type of sport, list of awards.

Create all necessary setters and getters.

In the testing program create array of participants. Select participants depending from the type of sport, number of national and international awards.

2. Please provide link to your GitHub with the solution. Additionally, to the solution it should contain readme with you matriculation number, solution project short description with indication of the development environment.
